PROFILE

Applied AI and Web3 developer building practical products across developer workflows, DeFi, smart contracts, and blockchain data. Experienced in Python, TypeScript, APIs, LLM integrations, and full-stack prototyping across EVM, Solana, and Sui. Four-time hackathon winner.

EDUCATION

Bachelor of Technology, CSE - IoT & CS
Lakshmi Narain College of Technology

Sep 2022 - Jun 2026
Bhopal, India

EXPERIENCE

Independent Applied AI & Full-Stack Developer | Self-directed projects | Jan 2024 - Present

- Shipped 15+ self-directed AI and Web3 prototypes covering APIs, contracts, data integrations, and user-facing workflows.
- Built LLM tool-use and retrieval workflows with OpenAI, Gemini, IBM watsonx.ai, structured outputs, live blockchain data endpoints, wallets, and webhooks.

Web3 Builder, Batch #23 Graduate | BuidlGuidl | Dec 2025 - Jan 2026

- Built an All Builders directory using The Graph for live on-chain developer profiles; resolved Vercel file-tracing issues and configured Arbitrum NFT metadata.

SELECTED PROJECTS

Nuvra - Proof-first job intelligence agent

- Reads live roles and public evidence to produce grounded fit reports, proof briefs, and application drafts with structured AI outputs and deterministic fallbacks.

BrandBrain - Cited company knowledge layer

- Built document ingestion, cited Q&A, public knowledge links, analytics, and Ogilvy-style copy scoring with Next.js, OpenAI, Supabase, and PostgreSQL.

Morrow - Stablecoin-native receivables credit

- Built an Arc Testnet market for buyer-accepted invoices, lender auctions, USDC advances, and contract-enforced settlement waterfalls.

Aegis - Policy-protected Sui intent execution

- Turns plain-English goals into typed execution plans, reads DeepBook state, dry-runs a PTB, enforces an owned Move policy, and mints an on-chain receipt.

Gavel - Autonomous on-chain dispute resolution

- Connected five agent research and verdict stages to a Somnia escrow contract with authenticated callbacks, strict output validation, recovery paths, and 38 passing tests.

ACHIEVEMENTS

- 4x hackathon winner: Encode Mezo 2026, ETH HackMoney 2026, bitsCrunch Best AI LLM Integration, and bitsCrunch Unique Implementation.
- Built RiskShield through Atrium Academy x Uniswap Foundation Hook Incubator Cohort 9; completed Rektoff x Solana Foundation Rust Security Bootcamp.

TECHNICAL SKILLS

AI & Backend: Python, TypeScript, Node.js, Flask, REST APIs, OpenAI API, Gemini, IBM watsonx.ai, RAG, structured outputs, tool use, Docker

Web3: Solidity, Rust, Move, EVM, Solana, Sui, The Graph, Uniswap V3/V4, DeepBook, ENS, wallets and indexers

Product: React, Next.js, Tailwind CSS, Vercel, Git, accessible UI
